

Value Portal – Scope & Business Requirements Document (BRD)

Document Purpose

This Business Requirements Document defines the

Product Name – Idea Portal

What is Idea Portal?

Value Portal is a centralized platform designed to convert delivery intelligence into measurable business outcomes - by capturing leads, ideas, and value insights directly from teams closest to the client.

Why did it come into execution?

- Opportunities are being identified daily - but not tracked
- No structured visibility of value created by delivery teams
- Missed revenue, delayed decisions, and fragmented communication

◆ 4. Scope of Implementation

- Lead & Idea Capture System
- Automated Assignment Engine
- AI-based Classification
- Notifications & Escalation System
- Dashboards & Reports
- Governance Review Cycles
- Gamification (Leaderboard & Scoring)

5. How It Works

AI Classification & Auto Assignment

 AI Classification

AI Category Automation

AI Summary

This idea proposes to automate the manual testing process, which can save significant time and resources. By leveraging AI-powered testing, the delivery team can streamline the testing workflow and improve overall efficiency.

Real-Time Status Tracking

Value Realization (Revenue / Cost Savings)

Some Exclusive Features

≥ Gamification (Engagement Layer)

- Points system
- Leaderboard
- Recognition of contributors

Idea Portal Login

User Roles and Access Model

The system shall provide **two distinct login experiences**:

Admin Login:

The Admin role shall have access to the full portal, including but not limited to:

- User management
- Account creation and maintenance
- Stakeholder mapping
- Lead and Value Idea visibility across all accounts
- Assignment monitoring
- Dashboard and reporting visibility across the organization
- Governance and review sections
- Leaderboard and scoring visibility
- Routing configuration and escalation oversight

End User Login:

The following sections shall be visible:

- Leads
- Value Idea
- My Dashboard
- Your Score
- Leaderboard

8. Functional Requirements

8.1 Authentication and Login

- The portal shall support **two login types**:
 - Admin
 - End User
- Access to modules and data shall be controlled based on user role.
- Unauthorized sections shall not be visible to users without permissions.

8.2 UI and Branding

- The current black-themed UI shall be updated to reflect the **existing brand colors**.
- The visual design shall remain professional, modern, and enterprise-ready.

- Capitalization shall be standardized throughout the portal for all labels, headings, menus, buttons, forms, notifications, and reports.
- UI text shall follow a consistent capitalization standard across the application.

8.3 Account Creation and Search Experience

Within the **New Account** section:

- The **Account Name** field shall not function as a static dropdown.
- It shall support predictive search / auto-suggestion behavior.
- When the user types the first **three characters or more** of the client/account name, the system shall display matching account options dynamically.
- All relevant accounts matching the typed input shall be suggested for selection.
- This is intended to improve searchability and avoid a large manual dropdown list.

8.4 Lead and Value Idea Capture

Lead Capture

The portal shall support structured lead submission with fields such as:

- Account
- Lead title
- Type of lead
- Business context
- Estimated value
- Region / vertical / service line
- Attachments if required
- Suggested stakeholders
- Status

Type of Lead

The **Type of Lead** field shall support at minimum:

- **Current Lead**
- **New Lead**

Definitions

- **Current Lead** refers to opportunities associated with existing accounts or ongoing business relationships.
- **New Lead** refers to opportunities or ideas related to new prospects, including those derived from:
 - Previous project experience
 - Competitor analysis
 - Project analysis
 - Vertical-specific insights
 - Service-line opportunities
 - Market intelligence

Value Idea Capture

The Value Idea module shall allow users to log ideas that can lead to revenue generation, cost savings, innovation, or strategic advantage.

Mandatory Attachment Requirement

For every Value Idea submission:

- An **attachment field shall be mandatory**
- The attachment shall allow the submitter to share a brief, concept note, or supporting document
- This will help reviewers understand the context, relevance, and worthiness of the idea without needing additional clarification meetings

8.5 Stakeholder Mapping

Business Requirement

Stakeholder mapping shall be maintained in the UI and not solely in the database.

Requirement Definition

- Stakeholder mapping shall be a **mandatory precondition before go-live**
- The system shall provide an administrative interface for stakeholder mapping and maintenance
- Manual DB-only maintenance shall not be the long-term operating model

Stakeholders to be Mapped

For each account and/or route configuration, the following stakeholder types shall be supported as applicable:

- DU
- DH
- Sales stakeholder
- Account Owner, where applicable
- Practice Leader, where applicable
- Additional copied stakeholders

8.6 Routing and Assignment Engine

Routing Principle

Routing shall not depend only on account-owner mapping. The routing model shall be based on organizational review flow.

Required Routing Flow

When a lead or value idea is submitted:

1. It shall first be routed to the relevant **DU**
2. It shall then be sent to the relevant **DH**
3. The respective **Sales person** shall be tagged based on region
4. **Adeesh** shall be copied on all such workflows

Regional Sales Tagging Examples

Illustrative mapping provided:

- **Sahil Baquer** – EMEA
- **Joe** – US
- **Adeesh** – copied on all cases

The system shall support configurable sales mappings by geography/region to ensure correct routing.

Vertical Coverage

All verticals shall be added into the routing model so that submissions can be directed to the corresponding DU and DH as applicable.

Routing Preconditions

For routing to proceed successfully, the required organizational mapping for DU and DH must exist. Sales mapping must also exist based on region.

Review Cycle

- The system shall support defined routing timelines, including a **7-day review cycle**
- Stakeholder-specific status tracking shall be maintained
- The system shall show pending, reviewed, escalated, and completed actions

8.7 Fallback Logic

If a lead or value idea is submitted and the account has missing stakeholder mappings:

- The system shall not silently fail
- The submission shall be accepted and marked as **Routing Pending / Mapping Missing**
- The Admin shall receive an alert for immediate stakeholder mapping completion
- The submission shall remain visible in an exception queue until routing is resolved
- Email notification may be sent to the Admin or governance mailbox for intervention

This ensures no lead or value idea is lost due to incomplete configuration.

8.8 AI-Based Classification

The system shall support AI-assisted classification for submitted leads and value ideas.

AI Capabilities

- Auto-categorization of submissions
- Summary generation
- Confidence score generation
- Suggestion support for classification and routing, where feasible

Categories

Examples may include:

- Upsell
- Cross-sell
- Innovation
- Cost optimization
- New opportunity
- Strategic value idea

AI outputs shall support, not replace, reviewer decision-making.

8.9 Notifications and Email Integration

Mandatory Requirement

Email integration is mandatory.

Whenever a new lead or a new value idea is logged in the portal:

- The system shall trigger email notifications to the respective stakeholders
- Notifications shall be sent as part of the routing workflow
- The relevant DU, DH, tagged Sales stakeholder, and copied stakeholder(s) shall receive the email as applicable

Notification Events

At minimum, the system shall send notifications for:

- New lead submission
- New value idea submission
- Routing to reviewer/stakeholder
- Reminder for pending review
- Escalation for overdue review
- Status change
- Qualification/disqualification outcome
- Win/loss update where applicable

Delivery Channels

- In-application notification
- Email notification

8.10 Dashboard and Reporting

Dashboard Requirements

The system shall provide real-time dashboards for different user groups.

End User Dashboard

The End User shall have access to:

- My submissions
- My pending items
- My score
- My contribution summary
- Leaderboard visibility

Admin Dashboard

The Admin dashboard shall provide:

- Full pipeline visibility
- Submission trends
- Status-wise distribution
- Revenue and savings tracking
- Qualification ratios
- Reviewer turnaround metrics
- Region / vertical / account analytics
- Governance and exception tracking

Reporting Flow Requirement

In the reporting section, the process flow shall be clearly represented as:

Lead → Assigned To → Status → Qualified / Disqualified → Win / Loss

This shall be visible in reports, dashboards, and review summaries wherever applicable.

For value ideas, an equivalent progression may include:

Value Idea → Assigned To → Review Status → Approved / Rejected → Implemented / Not Implemented

Questions encountered regarding the application:

Routing design decisions before we finalize the flow:

Q1 — Overall Flow Confirmation

Current flow: Create users with roles → Create accounts → Submit leads/ideas → Auto-route to account stakeholders (owner / sales lead / practice leader).

Proposed flow:

Q2 - Stakeholder Mapping in UI**

Currently stakeholder mapping is maintained manually in DB. Should we make stakeholder mapping mandatory in UI before go-live?"

Q3 - Routing Requirement

When a lead or idea is submitted, which stakeholder must be present for routing to proceed?

A) Account Owner required

B) Any mapped stakeholder — owner first, then sales lead, then practice leader

Q4 - Fallback When No Stakeholders Are Mapped

If an account has zero stakeholder mappings and a lead/idea is submitted, what should happen?

Q5 - How should sections be displayed based on user roles? For example, in the review report, should a user see all leads/value ideas or only the ones they have reviewed?

Regarding the current database setup on Supabase. We are currently on the free tier, which covers our early-stage needs. It supports up to 2 projects, 500 MB of database storage, 50,000 monthly active users (MAUs), 1 GB of file storage, and 500,000 Edge Function calls per month. File uploads are capped at 50 MB each.

This works well for our current scale, but as we grow, we will need to plan for the Pro plan at \$25/month

per project. That unlocks 8 GB of database storage, 100K MAUs, 100 GB of file storage, and guaranteed uptime with no automatic project pausing.

Change subscription plan for TestingXperts [Pricing](#)

FREE Current plan

\$0.00 / month

Current plan

- ✓ Unlimited API requests
- ✓ 50,000 monthly active users
- ✓ 500 MB database size
Shared CPU • 500 MB RAM
- ✓ 5 GB egress
- ✓ 5 GB cached egress
- ✓ 1 GB file storage
- ✓ Community support

Free projects are paused after 1 week of inactivity. Limit of 2 active projects.

PRO Most Popular

From **\$25.00** / month

Upgrade to Pro

- ✓ 100,000 monthly active users
then \$0.00325 per MAU
- ✓ 8 GB disk size per project
then \$0.125 per GB
- ✓ 250 GB egress
then \$0.09 per GB
- ✓ 250 GB cached egress
then \$0.03 per GB
- ✓ 100 GB file storage
then \$0.021 per GB
- ✓ Email support
- ✓ Daily backups stored for 7 days
- ✓ 7-day log retention
- ✓ Add Log Drains
additional \$60 per drain, per project

TEAM

From **\$599.00** / month

Upgrade to Team

- ✓ SOC2
- ✓ Project-scoped and read-only access
- ✓ HIPAA available as paid add-on
- ✓ SSO for Supabase Dashboard
- ✓ Priority email support & SLAs
- ✓ Daily backups stored for 14 days
- ✓ 28-day log retention
